

Lab 01: Cloud IAM Qwik Start

Cloud Security Fundamentals | GSP064

Overview

Explored Cloud IAM by signing in as two users with different roles. Granted and revoked permissions to demonstrate how IAM controls access across GCP services.

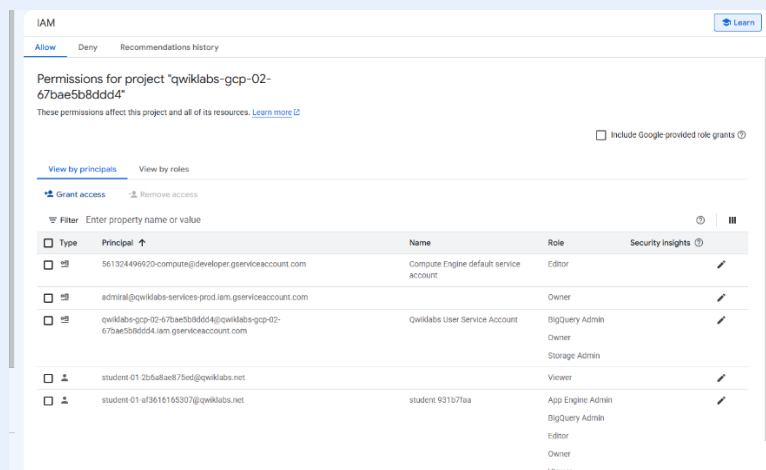

Objectives

- Explore IAM console and project level roles
- Create a Cloud Storage bucket and upload a file
- Verify Viewer access as Username 2
- Remove project access from Username 2
- Grant Storage Object Viewer role to Username 2
- Verify specific resource access via CLI

Task 1 - Explore IAM Console

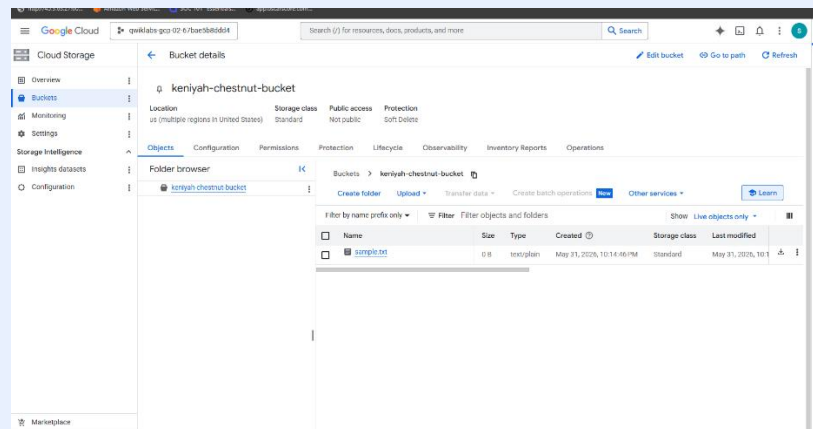

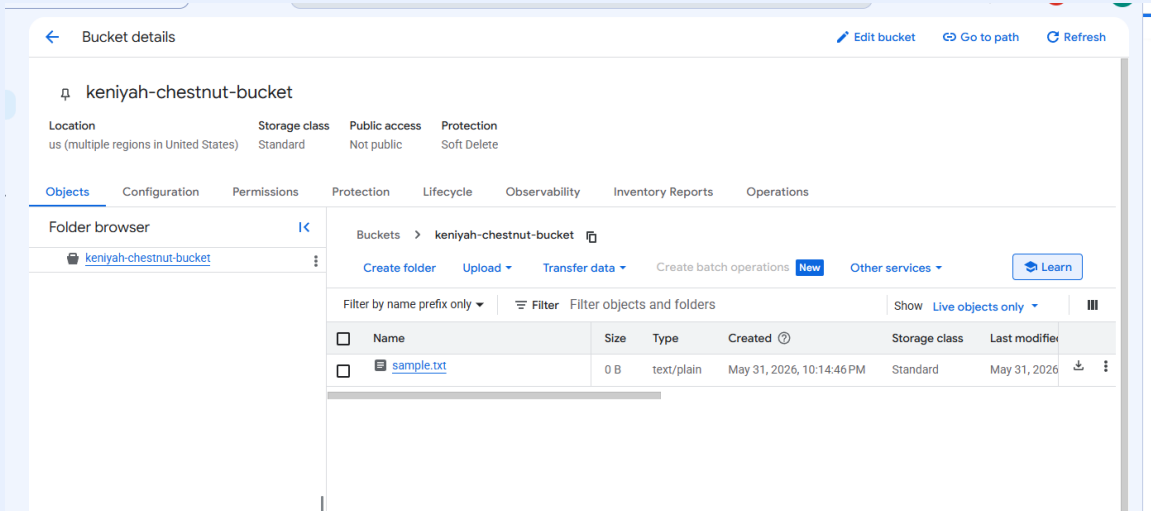

Signed in as Username 1 (Owner) and Username 2 (Viewer). Compared what each user can see and do in the console.

- Username 1 (Owner): Can grant and manage all permissions
- Username 2 (Viewer): Grant Access button grayed out

Task 2 - Create Bucket and Upload File

As Username 1 created a Cloud Storage bucket with Multi-Region location and uploaded sample.txt. Verified Username 2 could view it as a Viewer.

Task 3 - Remove Project Access

Removed Viewer role from Username 2 via IAM. Username 2 received a permission error when trying to access Cloud Storage.

Now viewing project "nwiklabs-gcp-02-67bae5b8ddd4" in organization "No

📘

Gemini CLI is available in Cloud Shell terminal! Type gemini to try it. [Learn more](#)

```
Welcome to Cloud Shell! Type "help" to get started, or type "gemini" to try prompting with Gemini CLI.
Your Cloud Platform project in this session is set to quwiklabs-gcp-02-67bae5b8ddd4.
Use 'gcloud config set project [PROJECT_ID]' to change to a different project.
student_01 af3616165307@cloudshell: (qwiklabs-gcp-02-67bae5b8ddd4) $ gcloud storage ls gs://keniyah-chestnut-bucket
gs://keniyah-chestnut-bucket/sample.txt
student_01 af3616165307@cloudshell:~ (qwiklabs-gcp-02-67bae5b8ddd4) $
```

What I Learned

- Project-level roles like Viewer apply to all services in the project
- Resource-level roles like Storage Object Viewer apply to specific resources only
- Revoking a role can take up to 80 seconds to propagate
- Users with no project role can still access specific resources via resource-level roles
